Shape Characterization

6.1 STATISTICS FOR SHAPE DESCRIPTORS

6.2 SOME GENERAL DESCRIPTORS

- 6.2.1 Perimeter
- 6.2.2 Area
- 6.2.3 Centroid (center of mass)
- 6.2.4 Maximum and Minimum Distance to Centroid
- 6.2.5 Distance to the Boundary
- 6.2.6 Diameter
- 6.2.7 Maximum Chord
- 6.2.8 Norm Sizes
- 6.2.9 Maximum Arc Length
- 6.2.10 Major and Minor Axis
- 6.2.11 Thickness
- 6.2.12 Holes-based Shape Features

- 6.2.13 Topological Descriptors
- 6.2.14 Polygonal Approximation-Based Shape Descriptors
- 6.2.15 Shape Descriptors based on Regions and on Graphs
- 6.2.16 Complexity Descriptors

6.3 FRACTAL GEOMETRY FOR COMPLEXITY DESCRIPTORS

- 6.3.1 Preliminary Considerations and Definitions
- 6.3.2 The Box-Counting Approach
- 6.3.3 Case Example: The Classical Koch Curve
- 6.3.4 Implementing the Box-Counting Method
- 6.3.5 The Minkowski Sausage or Dilation Method

6.4 CURVATURE

- 6.4.1 Biological Motivation
- 6.4.2 Simple Approaches to Curvature
- 6.4.3 Curvature-Based Shape Descriptors
- 6.4.4 c-Curvature

6.5 SHAPE SIGNATURES

6.6 FOURIER DESCRIPTORS

- 6.6.1 Alternative Fourier Descriptors
